

Package ‘motifStack’

April 23, 2016

Type Package

Version 1.14.0

Date 2015-10-9

Title Plot stacked logos for single or multiple DNA, RNA and amino acid sequence

Author Jianhong Ou, Michael Brodsky, Scot Wolfe and Lihua Julie Zhu

Maintainer Jianhong Ou <jianhong.ou@umassmed.edu>

Imports XML, scales

Depends R (>= 2.15.1), methods, grImport, grid, MotIV, ade4, Biostrings

Suggests RUnit, BiocGenerics, MotifDb, RColorBrewer, BiocStyle, knitr

biocViews SequenceMatching, Visualization, Sequencing, Microarray, Alignment, ChIPchip, ChIPSeq, MotifAnnotation, DataImport

Description The motifStack package is designed for graphic representation of multiple motifs with different similarity scores. It works with both DNA/RNA sequence motif and amino acid sequence motif. In addition, it provides the flexibility for users to customize the graphic parameters such as the font type and symbol colors.

motifStack-package	<i>Plot stacked logos for single or multiple DNA, RNA and amino acid sequence</i>
--------------------	---

Description

motifStack is a package that is able to draw amino acid sequence as easy as to draw DNA/RNA sequence. motifStack provides the flexibility for users to select the font type and symbol colors. motifStack is designed for graphical representation of multiple motifs.

Author(s)

Jianhong Ou and Lihua Julie Zhu

Maintainer: Jianhong Ou <jianhong.ou@umassmed.edu>

colorset	<i>retrieve color setting for logo</i>
----------	--

Description

retrieve color setting for logo

Usage

```
colorset(alphabet="DNA", colorScheme='auto')
```

Arguments

alphabet	character, 'DNA', 'RNA' or 'AA'
colorScheme	'auto', 'charge', 'chemistry', 'classic' or 'hydrophobicity' for AA, 'auto' or 'basepairing' for DNA or RNA

Value

A character vector of color scheme

Examples

```
col <- colorset("AA", "hydrophobicity")
```

DNAmotifAlignment	<i>align DNA motifs</i>
-------------------	-------------------------

Description

align DNA motifs for plotting motifs stack

Usage

```
DNAmotifAlignment(pfms, threshold=0.4, minimalConsensus=0,
                  rcpostfix="(RC)", revcomp=rep(TRUE, length(pfms)))
```

Arguments

pfms	a list of position frequency matrices, pfms must be a list of class pfm
threshold	information content cutoff threshold for useful positions
minimalConsensus	minimal length of consensus for alignment
rcpostfix	the postfix for reverse complements
revcomp	a logical vector to indicates whether the reverse complemet should be involved into alignment

Value

a list of aligned motifs

Examples

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
motifs<-lapply(pcms,pcm2pfm)
motifs<-DNAmotifAlignment(motifs)
```

getRankedUniqueMotifs *get the unique motif in each category grouped by distance*

Description

to get the unique motif in a given category, eg by species.

Usage

```
getRankedUniqueMotifs(phylog, attr)
```

Arguments

phylog	an object of class phylog
attr	attribute used for category of motifs

Value

return a list:

uni.rank	unique motif ranks
uni.length	length of unique motif grouped by distance
uni.list	unique motif names grouped by distance

Author(s)

Jianhong Ou

Examples

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  matrix.human <- query(MotifDb, "Hsapiens")
  pfms <- c(as.list(matrix.fly), as.list(matrix.human))
  pfms <- pfms[sample(1:length(pfms), 100)]
  jaspar.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),
    "extdata", "jaspar2010_PCC_SWU.scores"))
  d <- MotIV::motifDistances(lapply(pfms, pfm2pwm))
```

```
hc <- MotIV::motifHclust(d, method="average")
phylog <- hclust2phylog(hc)
leaves <- names(phylog$leaves)
attr <- gsub("^(.*)_.*$", "\\1", leaves)
getRankedUniqueMotifs(phylog, attr)
}
```

highlightCol	<i>add alpha transparency value to a color</i>
--------------	--

Description

An alpha transparency value can be specified to a color, in order to get better color for background.

Usage

```
highlightCol(col, alpha = 0.5)
```

Arguments

col	vector of any of the three kinds of R color specifications, i.e., either a color name (as listed by <code>colors()</code>), a hexadecimal string of the form "#rrggbb" or "#rrggbaa" (see <code>rgb</code>), or a positive integer <code>i</code> meaning <code>palette()[i]</code> .
alpha	a value in [0, 1]

Value

a vector of colors in hexadecimal string of the form "#rrggbaa".

Author(s)

Jianhong Ou

Examples

```
highlightCol(1:5, 0.3)
highlightCol(c("red", "green", "blue"), 0.3)
```

mergeMotifs *merge multiple motifs*

Description

merge multiple motifs by calculate mean of each position

Usage

```
mergeMotifs(..., bgNoise=NA)
```

Arguments

...	pcm or pfm objects
bgNoise	if it is not NA, test will using a background by Dirichlet(1)-distributed random frequencies with weight bg.noise. The value of bgNoise should be a number in the range of 0 to 1, eg. 0.05

Value

a pfm object

Author(s)

Jianhong Ou

Examples

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
mergeMotifs(pcms)
```

motifCircos *plot sequence logo stacks with a radial phylogenetic tree and multiple color rings*

Description

plot sequence logo stacks with a radial phylogenetic tree and multiple color rings. The difference from plotMotifStackWithRadialPhylog is that it has more color setting and one more group of pfms.

Usage

```
motifCircos(phylog, pfms=NULL, pfms2=NULL, R=2.5,
            r.tree=1, col.tree.bg=NULL, col.tree.bg.alpha=1,
            cnodes=0, labels.nodes=names(phylog$nodes), clabel.nodes=0,
            r.leaves=NA,
            cleaves=1, labels.leaves=names(phylog$leaves), clabel.leaves=1,
            col.leaves=rep("black", length(labels.leaves)),
            col.leaves.bg=NULL, col.leaves.bg.alpha=1,
            r.pfms=NA, r.pfms2=NA,
            r.rings=0, col.rings=list(),
            col.inner.label.circle=NULL, inner.label.circle.width=0.02,
            col.outer.label.circle=NULL, outer.label.circle.width=0.02,
            draw.box=FALSE,
            clockwise =FALSE, init.angle=if(clockwise) 90 else 0,
            angle=360, pfmNameSplitter=";", rcpostfix="(RC)",
            motifScale=c("linear","logarithmic"), ic.scale=TRUE,
            plotIndex=FALSE, IndexCol="black", IndexCex=.8,
            groupDistance=NA, groupDistanceLineCol="red",
            plotAxis=FALSE)
```

Arguments

phylog	an object of class phylog
pfms	a list of objects of class pfm
pfms2	a list of objects of class pfm
R	radius of canvas
r.tree	half width of the tree
col.tree.bg	a vector of colors for tree background
col.tree.bg.alpha	a alpha value [0, 1] of colors for tree background
cnodes	a character size for plotting the points that represent the nodes, used with par("cex")*cnodes. If zero, no points are drawn
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with par("cex")*clabel.nodes. If zero, no nodes labels are drawn
r.leaves	width of the leaves
cleaves	a character size for plotting the points that represent the leaves, used with par("cex")*cleaves. If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with
col.leaves	a vector of colors for leaves labels
col.leaves.bg	a vector of colors for background of leaves labels
col.leaves.bg.alpha	alpha value [0, 1] for the colors of background of leaves labels

<code>r.pfms</code>	width of the pfms
<code>r.pfms2</code>	width of the pfms2
<code>r.rings</code>	a vector of width of color rings
<code>col.rings</code>	a list of color rings
<code>col.inner.label.circle</code>	a vector of colors for inner circle of pfms
<code>inner.label.circle.width</code>	width for inner circle of pfms
<code>col.outer.label.circle</code>	a vector of colors for outer circle of pfms
<code>outer.label.circle.width</code>	width for outer circle of pfms
<code>draw.box</code>	if TRUE draws a box around the current plot with the function <code>box()</code>
<code>clockwise</code>	a logical value indicating if slices are drawn clockwise or counter clockwise
<code>init.angle</code>	number specifying the starting angle (in degrees) for the slices. Defaults to 0 (i.e., '3 o'clock') unless clockwise is true where init.angle defaults to 90 (degrees), (i.e., '12 o'clock')
<code>angle</code>	number specifying the angle (in degrees) for phylogenetic tree. Defaults 360
<code>pfmNameSplitter</code>	splitter when name of pfms/pfms2 contain multiple node of labels.leaves
<code>rcpostfix</code>	the postfix for reverse complements
<code>motifScale</code>	the scale of logo size
<code>ic.scale</code>	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
<code>plotIndex</code>	logical. If TRUE, will plot index number in the motifLogo which can help user to describe the motifLogo
<code>IndexCol</code>	The color of the index number when plotIndex is TRUE.
<code>IndexCex</code>	The cex of the index number when plotIndex is TRUE.
<code>groupDistance</code>	show groupDistance on the draw
<code>groupDistanceLineCol</code>	groupDistance line color, default: red
<code>plotAxis</code>	logical. If TRUE, will plot distance axis.

Value

none

      sample(colors(), 50),
      sample(colors(), 50)))
}

```

motifCloud

plot a DNA sequence logo cloud

Description

Plot a DNA sequence logo cloud

Usage

```

motifCloud(motifSig, rcpostfix="(RC)",
  layout=c("rectangles", "cloud", "tree"),
  scale=c(6, .5), rot.per=.1,
  draw.box=TRUE, draw.freq=TRUE,
  box.col="gray", freq.col="gray",
  group.col=NULL, groups=NULL, draw.legend=FALSE,
  font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)

```

Arguments

motifSig	an object of class motifSig
rcpostfix	postfix for reverse-complement motif names, default: (RC)
layout	layout of the logo cloud, rectangles, cloud or tree
scale	A vector of length 2 indicating the range of the size of the sequence logo.
rot.per	proportion sequence logo with 90 degree rotation. Only work for "cloud" layout
draw.box	draw box for each sequence logo or not
draw.freq	label frequency of each signature or not
box.col	color of box for each sequence logo
freq.col	color of frequency label
group.col	color setting for groups
groups	a named vectors of motif groups
draw.legend	draw group color legend or not
font	font of logo
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

Value

none

Examples

```

if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")

}

```

```

    motifCloud(motifSig)
}

```

motifPiles	<i>plot sequence logo stacks with a linear phylogenetic tree and multiple color sets</i>
------------	--

Description

plot sequence logo stacks with a linear phylogenetic tree and multiple color sets.

Usage

```

motifPiles(phylog, pfms=NULL, pfms2=NULL,
           r.tree=.45, col.tree=NULL,
           cnodes=0, labels.nodes=names(phylog$nodes), clabel.nodes=0,
           cleaves=.2, labels.leaves=names(phylog$leaves), clabel.leaves=1,
           col.leaves=rep("black", length(labels.leaves)),
           col.leaves.bg=NULL, col.leaves.bg.alpha=1,
           r.pfms=NA, r.pfms2=NA, motifScale=c("logarithmic", "linear"),
           col.pfms=NULL, col.pfms.width=0.02,
           col.pfms2=NULL, col.pfms2.width=0.02,
           r.anno=0, col.anno=list(),
           pfmNameSplitter=";", rcpostfix="(RC)", ic.scale=TRUE,
           plotIndex=FALSE, IndexCol="black", IndexCex=.8,
           groupDistance=NA, groupDistanceLineCol="red")

```

Arguments

phylog	an object of class phylog
pfms	a list of objects of class pfm
pfms2	a list of objects of class pfm
r.tree	width of the tree
col.tree	a vector of colors for tree
cnodes	a character size for plotting the points that represent the nodes, used with par("cex")*cnodes. If zero, no points are drawn
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with par("cex")*clabel.nodes. If zero, no nodes labels are drawn
cleaves	a character size for plotting the points that represent the leaves, used with par("cex")*cleaves. If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with
col.leaves	a vector of colors for leaves labels

<code>col.leaves.bg</code>	a vector of colors for background of leaves labels
<code>col.leaves.bg.alpha</code>	alpha value [0, 1] for the colors of background of leaves labels
<code>r.pfms</code>	width of the pfms
<code>r.pfms2</code>	width of the pfms2
<code>motifScale</code>	the scale of logo size
<code>col.pfms</code>	a vector of colors for inner pile of pfms
<code>col.pfms.width</code>	width for inner pile of pfms
<code>col.pfms2</code>	a vector of colors for outer pile of pfms
<code>col.pfms2.width</code>	width for outer pile of pfms
<code>r.anno</code>	a vector of width of color sets
<code>col.anno</code>	a list of color sets
<code>pfmNameSplitter</code>	splitter when name of pfms/pfms2 contain multiple node of labels.leaves
<code>rcpostfix</code>	the postfix for reverse complements
<code>ic.scale</code>	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
<code>plotIndex</code>	logical. If TRUE, will plot index number in the motifLogo which can help user to describe the motifLogo
<code>IndexCol</code>	The color of the index number when plotIndex is TRUE.
<code>IndexCex</code>	The cex of the index number when plotIndex is TRUE.
<code>groupDistance</code>	show groupDistance on the draw
<code>groupDistanceLineCol</code>	groupDistance line color, default: red

Value

none

motifSig-class	Class "motifSig"
----------------	------------------

Description

An object of class "motifSig" represents the output of function [motifSignature](#)

Objects from the Class

Objects can be created by calls of the form `new("motifSig", signature, freq, nodelist, gpcol)`.

Slots

signatures list object of class "pfm"
freq code"numeric" signature frequency
nodelist list object of class "ouNode"
gpcol code"character" signature group color sets

Methods

signatures signature(object = "motifSig") return the signatures of motifSig

frequence signature(object = "motifSig") return the frequency of motifSig

nodelist signature(object = "motifSig") return the nodelist of motifSig

sigColor signature(object = "motifSig") return the group color sets of motifSig

motifSig-methods	<i>"motifSig" methods</i>
------------------	---------------------------

Description

methods for motifSig objects.

Usage

```
## S4 method for signature 'motifSig'
signatures(object)
## S4 method for signature 'motifSig'
frequence(object)
## S4 method for signature 'motifSig'
nodelist(object)
## S4 method for signature 'motifSig'
sigColor(object)
```

Arguments

object An object of class motifSig.

Methods

signatures signature(object = "motifSig") return the signatures of motifSig

frequence signature(object = "motifSig") return the frequency of motifSig

nodelist signature(object = "motifSig") return the nodelist of motifSig

sigColor signature(object = "motifSig") return the group color sets of motifSig

\$, \$<- Get or set the slot of `motifSig`

motifSignature	<i>get signatures from motifs</i>
----------------	-----------------------------------

Description

extract signatures from multiple motifs by distance calculated from STAMP

Usage

```
motifSignature(pfms, phylog, groupDistance, rcpostfix="(RC)",
min.freq=2, trim=0.2, families=list())
```

Arguments

pfms	a list of objects of class pfm
phylog	an object of class phylog
groupDistance	maximal distance of motifs in the same group
rcpostfix	postfix for reverse-complement motif names, default: (RC)
min.freq	signatures with frequency below min.freq will not be plotted
trim	minimal information content for each position of signature
families	for each family, the motif number in one signature should only count as 1

Value

an Object of class [motifSig](#)

Examples

```
if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  motifs <- as.list(matrix.fly)
  motifs <- motifs[grepl("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]
  names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "",
    gsub("_FBgn[0-9]+$", "",
      gsub("[^a-zA-Z0-9]", "_",
        gsub("_[0-9]+$", "", names(motifs))))))
  motifs <- motifs[unique(names(motifs))]
  pfms <- sample(motifs, 50)
  jasper.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),
    "extdata", "jaspar2010_PCC_SWU.scores"))
  d <- MotIV::motifDistances(lapply(pfms, pfm2pwm))
  hc <- MotIV::motifHclust(d, method="average")
  phylog <- hclust2phylog(hc)
  leaves <- names(phylog$leaves)
  pfms <- pfms[leaves]
  pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm",mat=pfms[[.ele]]),
```

```

                                name=.ele)},pfms)
motifSig <- motifSignature(pfms, phylog, groupDistance=0.1)
}

```

motifStack

plot a DNA sequence logo stack

Description

Plot a DNA sequence logo stack

Usage

```
motifStack(pfms, layout=c("stack", "treeview", "phylog", "radialPhylog"), ...)
```

Arguments

pfms	a list of objects of class pfm
layout	layout of the logo stack, stack, treeview or radialPhylog
...	any parameters could to pass to plotMotifLogoStack , plotMotifLogoStackWithTree , plotMotifStackWithPhylog or plotMotifStackWithRadialPhylog

Value

return a list contains pfms and phylog

Examples

```

if(interactive()){
  library("MotifDb")
  matrix.fly <- query(MotifDb, "Dmelanogaster")
  motifs <- as.list(matrix.fly)
  motifs <- motifs[grepl("Dmelanogaster-FlyFactorSurvey-", names(motifs), fixed=TRUE)]
  names(motifs) <- gsub("Dmelanogaster_FlyFactorSurvey_", "",
    gsub("_FBgn[0-9]+$", "",
      gsub("[^a-zA-Z0-9]", "_",
        gsub("(_[0-9]+)$", "", names(motifs))))))
  motifs <- motifs[unique(names(motifs))]
  pfms <- sample(motifs, 50)
  pfms <- lapply(names(pfms), function(.ele, pfms){new("pfm",mat=pfms[[".ele"]], name=.ele)},pfms)
  motifStack(pfms, "radialPhylog")
}

```

ouNode-class *Class* ouNode

Description

An object of class "ouNode" represents a motif node in a cluster tree

Objects from the Class

Objects can be created by calls of the form `new("ouNode", left, right, parent, distl, distr, sizel, sizer)`.

Slots

`left`: character indicates the name of left leave

`right`: character indicates the name of right leave

`parent`: character indicates the name of parent node

`distl`: numeric indicates the distance of left leave

`distr`: numeric indicates the distance of right leave

`sizel`: numeric indicates the size of left leave

`sizer`: numeric indicates the size of right leave

Methods

`$, $<-` Get or set the slot of `ouNode`

Examples

```
new("ouNode", left="A", right="B", parent="Root", distl=1, distr=2, sizel=1, sizer=1)
```

pcm-class *Class* "pcm"

Description

An object of class "pcm" represents the position count matrix of a DNA/RNA/amino-acid sequence motif. The entry stores a matrix, which in row *i*, column *j* gives the counts of observing nucleotide/or amino acid *i* in position *j* of the motif.

Objects from the Class

Objects can be created by calls of the form `new("pcm", mat, name, alphabet, color, background)`.

Slots

mat Object of class "matrix" The position count matrix
 name code"character" The motif name
 alphabet "character" The sequence alphabet. "DNA", "RNA", "AA" or "others".
 color a "character" vector. The color setting for each symbol
 background a "numeric" vector. The background frequency.

Methods

addBlank signature(x="pcm", n="numeric", b="logical") add space into the position count matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.
coerce signature(from = "pcm", to = "matrix"): convert object pcm to matrix
getIC signature(x = "pcm",) Calculate information content profile for position frequency matrix.
matrixReverseComplement signature(x = "pcm") get the reverse complement of position frequency matrix.
trimMotif signature(x = "pcm", t= "numeric") trim motif by information content.
plot signature(x = "pcm") Plots the sequence logo of the position count matrix.

Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A","C","G","T")
motif <- new("pcm", mat=as.matrix(pcm), name="bin_SOLEXA")
plot(motif)
```

 pcm-methods

"pcm" methods

Description

methods for pcm objects.

Usage

```
## S4 method for signature 'pcm,numeric,logical'
addBlank(x,n,b)
## S4 method for signature 'pcm,ANY'
getIC(x,p="missing")
## S4 method for signature 'pcm'
matrixReverseComplement(x)
## S4 method for signature 'pcm,ANY'
```

```

plot(x,y="missing",...)
## S4 method for signature 'pcm,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'matrix,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'matrix,numeric'
pcm2pfm(x,background)
## S4 method for signature 'data.frame,ANY'
pcm2pfm(x,background="missing")
## S4 method for signature 'data.frame,numeric'
pcm2pfm(x,background)
## S4 method for signature 'pcm,numeric'
trimMotif(x,t)

```

Arguments

x	An object of class pcm. For getIC, if parameter p is followed, x should be an object of matrix. For pcm2pfm, x also could be an object of matrix.
y	Not use.
p	p is the background frequency.
n	how many spaces should be added.
b	logical value to indicate where the space should be added.
background	a "numeric" vector. The background frequency.
t	numeric value of information content threshold for trimming.
...	Further potential arguments passed to plotMotifLogo.

Methods

addBlank signature(x="pcm", n="numeric", b="logical") add space into the position count matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.

coerce signature(from = "pcm", to = "matrix"): convert object pcm to matrix

getIC signature(x = "pcm",) Calculate information content profile for position frequency matrix.

matrixReverseComplement signature(x = "pcm") get the reverse complement of position frequency matrix.

plot signature(x = "pcm") Plots the sequence logo of the position count matrix.

trimMotif signature(x = "pcm", t= "numeric") trim motif by information content.

\$, \$<- Get or set the slot of [pcm](#)

Examples

```

pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A","C","G","T")

```

```

motif <- new("pcm", mat=as.matrix(pcm), name="bin_SOLEXA")
getIC(motif)
matrixReverseComplement(motif)
as(motif,"matrix")
pcm2pfm(motif)

```

pfm-class

Class "pfm"

Description

An object of class "pfm" represents the position frequency matrix of a DNA/RNA/amino-acid sequence motif. The entry stores a matrix, which in row *i*, column *j* gives the frequency of observing nucleotide/or amino acid *i* in position *j* of the motif.

Objects from the Class

Objects can be created by calls of the form `new("pfm", mat, name, alphabet, color, background)`.

Slots

`mat` Object of class "matrix" The position frequency matrix
`name` code"character" The motif name
`alphabet` "character" The sequence alphabet. "DNA", "RNA", "AA" or "others".
`color` a "character" vector. The color setting for each symbol
`background` a "numeric" vector. The background frequency.

Methods

addBlank signature(x="pfm", n="numeric", b="logical") add space into the position frequency matrix for alignment. *b* is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. *n* indicates how many spaces should be added.

coerce signature(from = "pfm", to = "matrix"): convert object pfm to matrix

getIC signature(x = "pfm",) Calculate information content profile for position frequency matrix.

getIC signature(x = "matrix", p = "numeric") Calculate information content profile for matrix. *p* is the background frequency

matrixReverseComplement signature(x = "pfm") get the reverse complement of position frequency matrix.

trimMotif signature(x = "pfm", t= "numeric") trim motif by information content.

plot signature(x = "pfm") Plots the sequence logo of the position frequency matrix.

Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A","C","G","T")
motif <- pcm2pfm(pcm)
motif <- new("pfm", mat=motif, name="bin_SOLEXA")
plot(motif)
```

pfm-methods

"pfm" methods

Description

methods for pfm objects.

Usage

```
## S4 method for signature 'pfm,numeric,logical'
addBlank(x,n,b)
## S4 method for signature 'pfm,ANY'
getIC(x,p="missing")
## S4 method for signature 'matrix,numeric'
getIC(x,p)
## S4 method for signature 'pfm'
matrixReverseComplement(x)
## S4 method for signature 'pfm,ANY'
plot(x,y="missing",...)
## S4 method for signature 'pfm,numeric'
trimMotif(x,t)
```

Arguments

x	An object of class pfm. For getIC, if parameter p is followed, x should be an object of matrix.
y	Not use.
p	p is the background frequency.
n	how many spaces should be added.
b	logical value to indicate where the space should be added.
t	numeric value of information content threshold for trimming.
...	Further potential arguments passed to plotMotifLogo.

Methods

addBlank signature(x="pfm", n="numeric", b="logical") add space into the position frequency matrix for alignment. b is a bool value, if TRUE, add space to the 3' end, else add space to the 5' end. n indicates how many spaces should be added.

getIC signature(x = "pfm",) Calculate information content profile for position frequency matrix.

getIC signature(x = "matrix", p = "numeric") Calculate information content profile for matrix. p is the background frequency

matrixReverseComplement signature(x = "pfm") get the reverse complement of position frequency matrix.

plot signature(x = "pfm") Plots the sequence logo of the position frequency matrix.

trimMotif signature(x = "pfm", t= "numeric") trim motif by information content.

\$, \$<- Get or set the slot of `pfm`

Examples

```
pcm <- read.table(file.path(find.package("motifStack"), "extdata", "bin_SOLEXA.pcm"))
pcm <- pcm[,3:ncol(pcm)]
rownames(pcm) <- c("A", "C", "G", "T")
motif <- pcm2pfm(pcm)
motif <- new("pfm", mat=motif, name="bin_SOLEXA")
getIC(motif)
matrixReverseComplement(motif)
addBlank(motif, 1, FALSE)
addBlank(motif, 3, TRUE)
as(motif, "matrix")
```

pfm2pwm

convert pfm object to PWM

Description

convert pfm object to PWM

Usage

```
pfm2pwm(x)
```

Arguments

x an object of `pfm` or `pcm` or matrix

Value

A numeric matrix representing the Position Weight Matrix for PWM.

Author(s)

Jianhong Ou

See Also[PWM](#)**Examples**

```
library("MotifDb")
matrix.fly <- query(MotifDb, "Dmelanogaster")
pfm2pwm(matrix.fly[[1]])
```

plotMotifLogo	<i>plot sequence logo</i>
---------------	---------------------------

Description

plot amino acid or DNA sequence logo

Usage

```
plotMotifLogo(pfm, motifName, p=rep(0.25, 4), font="Helvetica-Bold",
colset=c("#00811B", "#2000C7", "#FFB32C", "#D00001"),
xaxis=TRUE, yaxis=TRUE, xlab="position", ylab="bits",
xlcex=1.2, ylcex=1.2, ncex=1.2, ic.scale=TRUE, fontsize=12)
```

Arguments

pfm	a position frequency matrices
motifName	motif name
p	background possibility
font	font of logo
colset	color setting for each logo letter
xaxis	draw x-axis or not
yaxis	draw y-axis or not
xlab	x-label, do nothing if set xlab as NA
ylab	y-label, do nothing if set ylab as NA
xlcex	cex value for x-label
ylcex	cex value for y-label
ncex	cex value for motif name
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

Value

none

Examples

```
pcm<-matrix(runif(40,0,100),nrow=4,ncol=10)
pfm<-pcm2pfm(pcm)
rownames(pfm)<-c("A","C","G","T")
plotMotifLogo(pfm)
```

plotMotifLogoA *plot sequence logo without plot.new*

Description

plot amino acid or DNA sequence logo in a given canvas

Usage

```
plotMotifLogoA(pfm, font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)
```

Arguments

pfm	an object of pfm
font	font of logo
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

Value

none

Examples

```
pcm<-matrix(runif(40,0,100),nrow=4,ncol=10)
pfm<-pcm2pfm(pcm)
rownames(pfm)<-c("A","C","G","T")
motif <- new("pfm", mat=pfm, name="bin_SOLEXA")
plotMotifLogoA(motif)
```

plotMotifLogoStack *plot sequence logos stack*

Description

plot sequence logos stack

Usage

```
plotMotifLogoStack(pfms, ...)
```

Arguments

pfms a list of position frequency matrices, pfms must be a list of class pfm
... other parameters can be passed to plotMotifLogo function

Value

none

Examples

```
pcm1<-matrix(c(0,50,0,50,
              100,0,0,0,
              0,100,0,0,
              0,0,100,0,
              0,0,0,100,
              50,50,0,0,
              0,0,50,50), nrow=4)
pcm2<-matrix(c(50,50,0,0,
              0,100,0,0,
              0,50,50,0,
              0,0,0,100,
              50,50,0,0,
              0,0,50,50), nrow=4)
rownames(pcm1)<-c("A","C","G","T")
rownames(pcm2)<-c("A","C","G","T")
pfms<-list(p1=new("pfm",mat=pcm2pfm(pcm1),name="m1"),
           p2=new("pfm",mat=pcm2pfm(pcm2),name="m2"))
pfms<-DNAMotifAlignment(pfms)
plotMotifLogoStack(pfms)
```

```
plotMotifLogoStackWithTree
```

plot sequence logos stack with hierarchical cluster tree

Description

plot sequence logos stack with hierarchical cluster tree

Usage

```
plotMotifLogoStackWithTree(pfms, hc, treewidth=1/8, trueDist=FALSE, ...)
```

Arguments

pfms	a list of position frequency matrices, pfms must be a list of class pfm
hc	an object of the type produced by stats::hclust
treewidth	the width to show tree
trueDist	logical flags to use hclust height or not.
...	other parameters can be passed to plotMotifLogo function

Value

none

Examples

```
#####Input#####
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"), "pcm$")
motifs<-lapply(pcms, pcm2pfm)

#####Clustering#####
jaspar.scores <- MotIV::readDBScores(file.path(find.package("MotIV"),
                                              "extdata", "jaspar2010_PCC_SWU.scores"))
d <- MotIV::motifDistances(lapply(motifs, pfm2pwm))
hc <- MotIV::motifHclust(d, method="average")

##reorder the motifs for plotMotifLogoStack
motifs<-motifs[hc$order]
##do alignment
motifs<-DNAmotifAlignment(motifs)
##plot stacks
plotMotifLogoStack(motifs, ncex=1.0)
plotMotifLogoStackWithTree(motifs, hc=hc)
```

plotMotifOverMotif *plot motif over another motif*

Description

plot motif over another motif to emphasize the difference.

Usage

```
plotMotifOverMotif(motif, backgroundMotif, bgNoise=NA,  
                  font="Helvetica-Bold", textgp=gpar())
```

Arguments

motif	an object of <code>pcm</code> or <code>pfm</code>
backgroundMotif	an object of <code>pcm</code> or <code>pfm</code>
bgNoise	if it is not NA, test will using a background by Dirichlet(1)-distributed random frequencies with weight <code>bg.noise</code> . The value of <code>bgNoise</code> should be a number in the range of 0 to 1, eg. 0.05
font	font for logo symbol
textgp	text parameter

Value

none

Examples

```
pcms <- readPCM(file.path(find.package("motifStack"), "extdata"), "pcm$")  
len <- sapply(pcms, function(.ele) ncol(.ele$mat))  
pcms <- pcms[len==7]  
plotMotifOverMotif(pcms[[1]], pcms[[2]], bgNoise=0.05)
```

plotMotifStackWithPhylog
plot sequence logo stacks with a ape4-style phylogenetic tree

Description

plot sequence logo stacks with a ape4-style phylogenetic tree

Usage

```
plotMotifStackWithPhylog(phylog, pfms=NULL,
                        f.phylog = 0.3, f.logo = NULL, cleaves = 1, cnodes = 0,
                        labels.leaves = names(phylog$leaves), clabel.leaves=1,
                        labels.nodes = names(phylog$nodes), clabel.nodes = 0,
                        font="Helvetica-Bold", ic.scale=TRUE, fontsize=12)
```

Arguments

phylog	an object of class phylog
pfms	a list of objects of class pfm
f.phylog	a size coefficient for tree size (a parameter to draw the tree in proportion to leaves label)
f.logo	a size coefficient for the motif
cleaves	a character size for plotting the points that represent the leaves, used with <code>par("cex")*cleaves</code> . If zero, no points are drawn
cnodes	a character size for plotting the points that represent the nodes, used with <code>par("cex")*cnodes</code> . If zero, no points are drawn
labels.leaves	a vector of strings of characters for the leaves labels
clabel.leaves	a character size for the leaves labels, used with
labels.nodes	a vector of strings of characters for the nodes labels
clabel.nodes	a character size for the nodes labels, used with <code>par("cex")*clabel.nodes</code> . If zero, no nodes labels are drawn
font	font of logo
ic.scale	logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
fontsize	font size of the template for <code>grImport</code> , default 12. Higher value make better quality figure, but also increase the file size.

Value

none

}

```

plotMotifStackWithRadialPhylog

plot sequence logo stacks with a radial phylogenetic tree

Description

plot sequence logo stacks with a radial phylogenetic tree

Usage

```

plotMotifStackWithRadialPhylog(phylog, pfms=NULL,
    circle=0.75, circle.motif=NA, cleaves=1, cnodes=0,
    labels.leaves=names(phylog$leaves), clabel.leaves=1,
    labels.nodes=names(phylog$nodes), clabel.nodes=0,
    draw.box=FALSE,
    col.leaves=rep("black", length(labels.leaves)),
    col.leaves.bg=NULL, col.leaves.bg.alpha=1,
    col.bg=NULL, col.bg.alpha=1,
    col.inner.label.circle=NULL, inner.label.circle.width="default",
    col.outer.label.circle=NULL, outer.label.circle.width="default",
    clockwise =FALSE, init.angle=if(clockwise) 90 else 0,
    angle=360, pfmNameSplitter=";", rcprefix = "(RC)",
    motifScale=c("linear","logarithmic"), ic.scale=TRUE,
    plotIndex=FALSE, IndexCol="black", IndexCex=.8,
    groupDistance=NA, groupDistanceLineCol="red",
    plotAxis=FALSE, font="Helvetica-Bold", fontsize=12)

```

Arguments

phylog an object of class phylog

<code>pfms</code>	a list of objects of class <code>pfm</code>
<code>circle</code>	a size coefficient for the outer circle
<code>circle.motif</code>	a size coefficient for the motif circle
<code>cleaves</code>	a character size for plotting the points that represent the leaves, used with <code>par("cex")*cleaves</code> . If zero, no points are drawn
<code>cnodes</code>	a character size for plotting the points that represent the nodes, used with <code>par("cex")*cnodes</code> . If zero, no points are drawn
<code>labels.leaves</code>	a vector of strings of characters for the leaves labels
<code>clabel.leaves</code>	a character size for the leaves labels, used with
<code>labels.nodes</code>	a vector of strings of characters for the nodes labels
<code>clabel.nodes</code>	a character size for the nodes labels, used with <code>par("cex")*clabel.nodes</code> . If zero, no nodes labels are drawn
<code>draw.box</code>	if TRUE draws a box around the current plot with the function <code>box()</code>
<code>col.leaves</code>	a vector of colors for leaves labels
<code>col.leaves.bg</code>	a vector of colors for background of leaves labels
<code>col.leaves.bg.alpha</code>	alpha value [0, 1] for the colors of background of leaves labels
<code>col.bg</code>	a vector of colors for tree background
<code>col.bg.alpha</code>	a alpha value [0, 1] of colors for tree background
<code>col.inner.label.circle</code>	a vector of colors for inner circle of <code>pfms</code>
<code>inner.label.circle.width</code>	width for inner circle of <code>pfms</code>
<code>col.outer.label.circle</code>	a vector of colors for outer circle of <code>pfms</code>
<code>outer.label.circle.width</code>	width for outer circle of <code>pfms</code>
<code>clockwise</code>	a logical value indicating if slices are drawn clockwise or counter clockwise
<code>init.angle</code>	number specifying the starting angle (in degrees) for the slices. Defaults to 0 (i.e., '3 o'clock') unless <code>clockwise</code> is true where <code>init.angle</code> defaults to 90 (degrees), (i.e., '12 o'clock')
<code>angle</code>	number specifying the angle (in degrees) for phylogenetic tree. Defaults 360
<code>pfmNameSplitter</code>	splitter when name of <code>pfms</code> contain multiple node of <code>labels.leaves</code>
<code>rcpostfix</code>	the postfix for reverse complements
<code>motifScale</code>	the scale of logo size
<code>ic.scale</code>	logical. If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
<code>plotIndex</code>	logical. If TRUE, will plot index number in the <code>motifLogo</code> which can help user to describe the <code>motifLogo</code>
<code>IndexCol</code>	The color of the index number when <code>plotIndex</code> is TRUE.

IndexCex	The cex of the index number when plotIndex is TRUE.
groupDistance	show groupDistance on the draw
groupDistanceLineCol	groupDistance line color, default: red
plotAxis	logical. If TRUE, will plot distance axis.
font	font of logo
fontsize	font size of the template for grImport, default 12. Higher value make better quality figure, but also increase the file size.

Value

none

}

```

plotXaxis *plot x-axis*

Description

plot x-axis for the sequence logo

Usage

```
plotXaxis(pfm, p=rep(0.25, 4))
```

Arguments

pfm position frequency matrices
p background possibility

Value

none

plotYaxis *plot y-axis*

Description

plot y-axis for the sequence logo

Usage

```
plotYaxis(ymax)
```

Arguments

ymax max value of y axis

Value

none

readPCM	<i>read pcm from a path</i>
---------	-----------------------------

Description

read position count matrix from a path

Usage

```
readPCM(path=".", pattern=NULL)
```

Arguments

path	a character vector of full path names
pattern	an optional regular expression

Value

A list of `pcm` objects

Examples

```
pcms<-readPCM(file.path(find.package("motifStack"), "extdata"),"pcm$")
```

reorderUPGMAtree	<i>re-order UPGMA tree</i>
------------------	----------------------------

Description

re-order the UPGMA tree by adjacent motif distance

Usage

```
reorderUPGMAtree(phylog, motifs, rcpostfix = "(RC)")
```

Arguments

phylog	an object of phylog
motifs	a list of objects of pfm
rcpostfix	the postfix for reverse complements

Value

an object of phylog
