

# The romaneg package\*

Mario Wolczko†

15 June 1992

This style option should not change the appearance of a document, but merely change the page numbers (as defined by `\count0`) in the DVI file to be negative when roman pag numbering is in use.

To do this, the `\@steppagecounter` macro increments the absolute value of `\count0`

---

\*This manual corresponds to `romaneg.sty` v1.03, dated 15 June 1992.
